## **W.A.R.P. Remote Access** (Work-Anywhere-Remotely Package)

### **Virtually anything is possible!**

Have you ever dreamed of being instantly transported from your house to your office without having to deal with the commute – or perhaps wished you could quickly jet home from a business trip to pick up a missing file? Our W.A.R.P. package makes that a virtual reality – it allows you to securely access your office computer, whether you're at home or on the road. No more weekend or late-night drives to the office; no more frantic last-minute faxing to get critical files you meant to bring with you!

In small business, your time is incredibly valuable – don't waste it trying to access data that's simply a click away! Whether you need access to your files for an important meeting or you want the flexibility of connecting to your system while on the road or on vacation (~ *don't worry, we won't tell your family!*), our W.A.R.P. package provides the perfect solution. It's the easiest way for you to stay on top of your business without **always** having to be there.

And while we're at it, let's not stop at just making *you* more efficient – why not transform the entire office! Think about all of the hours that are lost when employees are stuck at home with sick children or personal appointments – or they're unable to make it in to work after yet another snowstorm! All of that downtime can be eliminated by giving them the ability to log into their systems from home. Plus, if you have staff who travel, W.A.R.P. can make them a whole lot more productive while they're on the road too.

Still want more?! W.A.R.P. also enables us to give you remote technical support. That means we can take care of your computer issues without ever having to come to your office. Don't worry, if you miss us, we will still come by to see you from time to time, but when you have a problem, we can fix it immediately, without you ever having to leave your desk! That prevents even more downtime – which, of course, saves you money!

And speaking of money... this package is easily affordable for any business. Just the decrease in your gas bills alone should soon cover the cost.

We're pretty sure you spend enough time at the office already. We'd like to help you spend a little more time with your family, your friends or just having fun – and a little less time commuting, transferring files or trying to manage your business. Give Latest Developments a call today so we can help you **discover the advantages of working at W.A.R.P. speed!**

## Technical Data

Data Transfer	Clipboard mapping for copying between host and client computers
Printing	Printer mapping so print jobs can be sent to either host or client connected printer
Security	128bit encryption, TLS and RC4 Cipher used to secure communications in both directions between host and client computers
Roaming Disconnect	Allows re-connection to the same session if internet connection is lost or interrupted
Graphics Management	Compression and bitmap caching to accelerate graphics transfer

### Overview

We install and configure connection software on a client (away) computer to allow it to “log on” to a remote (host) computer. This allows you to work on the (host) computer as if you were sitting in front of it. Only video, keyboard and mouse I/O is transferred over the internet so the response time is almost real time on high speed internet connections. We ensure that all data moving between the computers is encrypted so it is safe while moving over public networks (internet).
